

TURNING LOCAL COURIER REQUESTS INTO A STRUCTURED SERVICE

A delivery business does not lose money on driving. It loses money on requests that arrive incomplete: a call with no drop-off, a text with no deadline, an email that does not say what is in the box. SQUSH LLC needed the request itself to do the work, so that by the time a person reads it, there is something to answer.

THE BUSINESS

THE REQUEST IS THE PRODUCT DECISION

SQUSH LLC runs local courier, transportation and concierge services across Las Vegas and North Las Vegas. The site says what it is in five words, courier and concierge, done locally, then spends the rest of its surface on one thing: making sure what arrives from a customer can actually be acted on.

The demands do not look alike. A package delivery is answerable from two addresses and a date. An errand is answerable only from a description. An urgent job is answerable from availability, not price. A federal inquiry is not a job at all. Put them through one contact form and every one arrives half-answered, which means every one costs a phone call before anything can be decided.

WHO SENDS A REQUEST

- Medical and dental offices moving supplies.
- Law and title offices moving documents.
- Local businesses with recurring runs.
- Individuals, families and front desks sending a box or an errand.
- Prime contractors and agencies looking for local capacity, on a separate track.

THE CHALLENGE

WHAT AN INCOMPLETE REQUEST ACTUALLY COSTS

Every problem here is a gap in information, and each gap lands on a small local operation where one person reads everything. Five gaps shaped the build.

THE REQUEST IS INCOMPLETE Nothing can be decided. The request becomes a callback, the callback a voicemail, and a job ready to run at 10 AM runs at 2 PM or not at all.	PICKUP AND DROP-OFF ARE AMBIGUOUS Route length, direction and feasibility are unknown, so the job cannot be priced, sequenced or combined with anything else going the same way.	URGENCY IS UNDECLARED Everything looks equally urgent, so nothing is prioritised correctly. The truly time-critical run competes with one that could wait.	THE ITEM IS UNSPECIFIED Medical supplies, legal documents and a box of stock are three different jobs in the same van, with different care and different exposure.	GEOGRAPHY IS ASSUMED A request from outside the service area cannot be accepted, and finding out on a phone call wastes both sides' time.
---	--	--	--	---

The organising principle: separate the demands before you design the inputs, then make each form ask for exactly what its reviewer needs to say yes, no or here is when, and nothing else.

THE SEARCHES BEHIND THE VISIT

LOCAL BUYERS SEARCH FOR A COURIER AND A PLACE

People looking for a courier are usually in a hurry and usually on a phone. Each search carries its own urgency and its own kind of item. The terms below are the language visitors use, shown as search language, not as a list of services offered.

SAME DAY AND URGENT The courier pathway offers same-day local delivery, handled with care. A compact priority form, repeated on several pages, asks for a needed-by date and checks availability. Same day delivery Same day courier service Same day package delivery Urgent courier service	COURIER NEAR ME Two cities are named in the page title, the footer and every service description, so the visitor knows before filling in a field whether they are in the area. Courier service near me Delivery service near me Local courier service Courier services	PACKAGES AND BUSINESS RUNS Package delivery and business deliveries are named capabilities of the courier pathway, covering local item transportation. Package delivery service Delivery courier service Business courier service
MEDICAL AND DOCUMENTS Medical supplies and important documents are published capabilities and selectable item types, with medical and dental offices and law and title offices named as ideal customers. Medical courier Medical courier service Medical supply delivery Document delivery service	ERRANDS Personal errands, pickup and delivery coordination and special local requests sit on a concierge pathway, because an errand is defined by its description, not a drop-down. Errand service Errand service near me	CONCIERGE Concierge has its own pathway and detail page, with an audience of busy professionals, families, offices and front desks, and property managers. Personal concierge services Concierge service near me

These terms describe how people search, not what the client offers. SQUSH serves Las Vegas and North Las Vegas only, so near me describes the search, not wider coverage. No specialised medical handling, chain of custody or temperature control is published or claimed.

WHAT WE BUILT

01 / 07

THREE SHORT STEPS, ABOUT A MINUTE

A person reads every request, so the measure of a good form is not how many submissions it produces but how many a person can answer without picking up the phone first. The site gives each kind of demand its own entry point, a three-step request flow and a short priority form repeated across pages, each capturing the specific thing its pathway needs before anyone reads it.

02 / 07

FOUR KINDS OF DEMAND, FOUR SEPARATE DOORS

The site publishes four numbered services, and they are deliberately not symmetrical. One is a transaction, one is a custom request, one is an availability check, and one is explicitly not bookable at all. A single form would have to ask every question any pathway might need, then hide most of them. Separating at the point of intent means each form is short because it is specific, and the click itself becomes the first and most valuable piece of routing information.

TWO BUTTONS PER SERVICE	Request for the decided, details for the undecided, so nobody is forced through either.
--------------------------------	---

AN HONEST BOUNDARY	Federal work can't be booked as a courier request, which protects the courier queue.
---------------------------	--

THE PRIORITY FORM	
8	REQUIRED FIELDS
4	OPTIONAL FIELDS
5	ITEM TYPES
3	STEPS IN THE FLOW

04 / 07

THE CUSTOMER NAMES THEIR OWN OFFER

The most unusual field is Your Offer. There is no price list to maintain across wildly different jobs, because an errand, a medical run and a document drop do not share a rate card. The customer names a number, optionally, and the published process reviews the request and the offer together before confirming. It puts a commercial signal on the request before anyone replies and keeps pricing conversational, which suits a business whose differentiator is that a person handles it.

STATED AND CHECKABLE	
COVERAGE Named, not implied	Two cities
HOURS Dispatch desk until 5 PM, local deliveries until 9 PM	Two clocks
FLEET Two white cargo vans	Two vans

06 / 07

A FEDERAL DOOR THAT IS ACTUALLY A DOOR

Federal work is a business-development journey, not a service request, and the site says so. A capability list is written in the language a prime contractor uses, and an inquiry form asks for name, company or agency, email, an optional phone and a message. It is correct because of what it leaves out: no pickup, no drop-off, no date, no item type. The single most important field is company or agency, because it identifies which conversation this is, and it keeps the conversation out of the delivery queue.

ONE ROUTE PER INTENT	
01	Courier request in three steps
02	Priority request for urgent local jobs
03	Concierge request by description
04	Federal inquiry with no delivery fields
05	General message routed by topic

WHAT HAPPENS AFTER YOU SEND

- 01 Tell us the pickup, drop-off, timing and what needs to move.
- 02 SQUSH reviews the request and the offer, then confirms the details.
- 03 The pickup is scheduled and handled in a white cargo van.
- 04 Handled over at the destination. Proof of delivery available after completion.

05 / 07

TWO CITIES, STATED EVERYWHERE

The most commercially useful thing the site does is refuse to sound bigger than it is. Currently serving Las Vegas and North Las Vegas appears on every page, in the title tag and in the service descriptions, so a visitor from elsewhere knows before they start. The about page states the fleet plainly, two white cargo vans, which makes every other promise legible: it explains the two-city area, the evening cut-off and why a person reviews each request. A site that names two cities and two clocks is making a promise it can keep.

RIGHT AROUND THE CORNER	Proximity as a service promise, not a slogan, in the headline over the vans section.
--------------------------------	--

A PERSON, NOT A QUEUE	The contact page is headed that way, and publishes a direct phone number as a feature.
------------------------------	--

FEDERAL CAPABILITIES, AS PUBLISHED

- Local document and package transport
- Medical and supply deliveries
- Scheduled and recurring routes
- Subcontracting with prime contractors

07 / 07

FIVE INTENTS, FIVE DIFFERENT ANSWERS

A single Contact us treats every visitor as the same person with the same question. Here, a courier request gets a confirmation, a priority request gets an availability answer, a concierge request gets a reply to a description, a federal inquiry gets a conversation, and a general message is routed by topic. Routing at the moment of intent is cheaper than correcting afterwards, particularly where the reviewer and the driver may be the same person.

RESULTS & IMPACT

A STRUCTURE, STATED AT THE LEVEL IT CAN BE DEFENDED

No performance data was supplied and none is claimed. What follows is capability created by the architecture, which is different from a measured result.

4 doors	Four services, clearly unlike Courier, concierge, priority and federal are described in their own terms, not blended into logistics solutions.	3 steps	Easier to start than to call About a minute, with the urgent path repeated across pages.
----------------	--	----------------	--

Answerable	Requests that arrive ready Route, contents, deadline and contact captured before a person reads it, the difference between a request and a callback.	2 cities	Specific where it counts Two cities, two clocks, two vans and a named process, every one of them checkable.
-------------------	--	-----------------	---

Federal	A capability route of its own Kept entirely out of the operational queue, with its own form and an explicit boundary.	4 steps	Expectations set in advance Reviewed, confirmed, scheduled and handed over, with proof of delivery, published before anyone commits.
----------------	---	----------------	--

No deliveries, delivery or response times, capacity beyond what the site publishes, revenue, pricing, contracts, awarded government work, registrations, certifications, set-aside status, partnerships, named clients, dispatch software, tracking technology or metrics are claimed. None were supplied. Nothing here describes a measured result.

WHAT'S NEXT

THREE WAYS TO SERVE THE BEST DEMAND

The architecture separates the demands well. The next layer gives the most valuable one its own door and measures whether the form is doing its job.

A PATH FOR RECURRING BUSINESS WORK Medical, dental, law and title offices are named as ideal customers. A short recurring-account enquiry would capture frequency, locations, contacts and access once instead of per job.
--

HELP THE CUSTOMER MAKE AN OFFER A typical-range line or two or three worked examples would raise the share of usable offers and cut review cycles spent on ones that never could work.
--

MEASURE THE FUNNEL Starts against completions at each step, share of requests by pathway, and the proportion that still needs a clarifying call, the one measure that shows whether the form is working.
