

SELLING A \$200M PROCUREMENT PRACTICE TO AN AUDIENCE THAT SCROLLS PAST EVERYTHING

Aegis Creek helps deep tech companies raise non-dilutive government capital. Its team has authored hundreds of winning federal proposals, and almost none of that was visible to the founders who needed it. We built a content engine, a LinkedIn publishing rhythm and a paid video campaign that put the firm's core argument in front of a quarter of a million professional feeds.

CLIENT Aegis Creek	INDUSTRY Government funding advisory	SERVICES Content - LinkedIn - Paid	GOAL Visibility & qualified reach	PERIOD 20 Aug - 18 Sep 2026
-----------------------	---	---------------------------------------	--------------------------------------	--------------------------------

THE CLIENT

A FIRM WITH ENORMOUS CREDIBILITY AND ALMOST NO WAY TO SHOW IT

Aegis Creek's team has authored winning federal proposals from \$100K R&D grants to \$200M+ procurements, across NSF, NIH, USDA, DOE, DARPA, SOCOM, Army Futures Command and the Space Force. It is headquartered in Palo Alto, with Washington D.C. and Austin presence.

Government funding advisory is a referral business, won in rooms and over introductions. That works until the firm wants to be found by the deep tech company that does not yet know a programme office exists, let alone which one funds their technology.

Federal funding, defense contracts and strategic positioning for technology and manufacturing companies with dual-use applications.

THE CHALLENGE

FIVE GAPS BETWEEN WHAT THE FIRM KNOWS AND WHAT THE MARKET SEES

The challenge was never capability. A deep tech founder evaluating funding advisors has no way to tell a firm with USSOCOM and CIA acquisition experience from a firm with a template and a subscription to a solicitation database. Both have a website. Both say "we win grants".

REACH THE RIGHT AUDIENCE Founders and CTOs are worrying about runway, not searching for "grant writer".	PROVE CREDIBILITY EARLY Expertise is invisible on a services page, so every sales conversation starts from scratch.	PUBLISH CONSISTENTLY Deep knowledge surfaces in meetings, not in public.	MOVE AT SOLICITATION SPEED Timely commentary arrives after the window closes without a production system.	BE DISCOVERABLE AT ALL Non-dilutive capital is unfamiliar to most venture-track founders.
FOUNDERS Deciding whether government capital is worth pursuing at all.	CTOS Holding the technology that agencies actually need solved.	HEADS OF BD Looking for a route to programmes they have never heard of.	PROGRAMME LEADS Needing to act on a change while it is still actionable.	

WHAT WE BUILT

01 / 05

ONE FUNDING INSIGHT, FIVE SURFACES

The engagement was never to run posts. It was to build a repeatable system: take live federal funding intelligence, turn it into a point of view, publish it where the buyer actually reads, republish it to an asset the firm owns, and put paid distribution behind the sharpest argument the firm has.

02 / 05

POSITION ON THE OUTCOME, NOT THE PAPERWORK

The category default is to sell the deliverable: proposal writing, grant applications, compliance support. Aegis Creek's positioning sells the strategic outcome instead, non-dilutive capital, and treats the paperwork as the mechanism.

NAME THE SECTORS	"AI, Cleantech, and Semi" in the H1 qualifies the buyer before any body copy is read.
LEAD WITH NON-DILUTIVE	The word that reframes government funding as capital that costs no equity.
PRACTITIONERS FIRST	"Technologists and entrepreneurs first, consultants second."
GOVERNMENT AS CUSTOMER	Find the agency's problem, position the capability as the answer.

03 / 05

NINE ARTICLES ANSWERING ONE UNASKED QUESTION

Every Insights piece answers something the reader has not thought to ask: is there federal money already open for what I build? Each takes a live, under-covered funding vehicle and explains who it is for and how to get in. There is deliberately no promotional content in the library. Making the system legible for free is the pitch.

DARPA	BARDA	DCSA	Army Corps of Engineers	Navy T&E
NIH	SBIR & STTR			

04 / 05

THE ONE CHANNEL WHERE THE AUDIENCE IS ADDRESSABLE BY WHO THEY ARE

A founder at a 30-person semiconductor company is a qualified prospect almost by definition. LinkedIn is the only major surface that reaches that person by role, seniority, company size and industry rather than by what they typed into a search box. The company page is the publishing home. Each article lives twice: once in the feed where the audience already is, once on the firm's own domain where it becomes an owned, linkable, indexable asset.

Paid is the reach layer. A video views campaign carried the firm's central argument: strong technology is only the starting point.

HOOK ARCHITECTURE	
A	Doesn't need more proposals → needs a strategy
B	Great technology doesn't win → mission-critical technology does
C	\$5B taught us one thing → winning is a system
The third closes on the only question in the set: "What's your system?"	

05 / 05

THREE CREATIVES, ONE ARGUMENT, ESCALATING

All three are built on one rhetorical move: take away the thing the prospect thinks is the answer, then name the real one. Each headline is negation followed by substitution, which works in a feed because the first three words disagree with the reader.

The set shares one visual grammar of deep navy, a cyan-to-magenta gradient from the Aegis Creek mark, condensed display type and a full-width call to action.

REFRAME THE ACTIVITY
Speaks to the founder already submitting and losing.

REFRAME THE BELIEF
Challenges the assumption that the best technology wins.

ASSERT AUTHORITY, THEN ASK
Closes on the only question in the set: what's your system?

RESULTS & IMPACT

VISIBILITY INFRASTRUCTURE, AT THE LEVEL IT CAN BE DEFENDED

This engagement built reach and assets. The honest account of its impact is what was verifiably delivered and what now exists.

261,101 Impressions Inside a four-week window, against \$269.21 of media spend.	22.62s Average dwell time Not a scroll-past. For a cold audience meeting an unfamiliar firm, a genuine hearing.
79 Clicks, all to the landing page None diverted to profiles or page views.	≈ \$1.03 CPM (derived) Spend divided by impressions. Cost per view is roughly \$0.001.
9 Owned insights articles Published to the firm's own domain rather than rented feed space.	1 Repeatable system Intelligence to post to article to paid amplification, a cycle the firm can run indefinitely.

Campaign figures are read from the LinkedIn Campaign Manager export; CPM and cost per view are arithmetic on those figures. No leads, revenue, pipeline or ROI are claimed, because conversion tracking was not in place during the period.

WHAT'S NEXT

TURNING REACH INTO AN AUDIENCE THE FIRM KEEPS

The creative is working. The next flight should be set up to keep what it buys, and to prove what it produces.

LINKEDIN INSIGHT TAG
Retarget video viewers and site visitors instead of paying for reach twice.

CONVERSION TRACKING
On the contact form and calendly booking, so clicks resolve into outcomes.

UTM DISCIPLINE
On every paid and organic link, so channel contribution is separable.

QUESTIONS

ABOUT THIS B2B MARKETING CASE STUDY

HOW MUCH DID THE LINKEDIN CAMPAIGN COST AND DELIVER? +

WHY LINKEDIN FOR A GOVERNMENT FUNDING ADVISORY FIRM? +

CAN CONTENT MARKETING WORK FOR A REFERRAL-BASED PROFESSIONAL SERVICES FIRM? +

EXPERTISE IS GENUINE AND INVISIBLE? THAT IS A DISTRIBUTION PROBLEM.

Bytes & Partners combines strategy, content and technology to reach the audiences that matter, and instruments the result so the impact can be proved rather than asserted.
